Leading exchange Binance last week saw its share of daily trade hit US$ 15 billion, while trading volume on the world’s largest stablecoin issuer Paxos, the new coin backed by leading US investment fund Jump Capital. The

A recession is an economic downturn that is severe enough to affect an entire economy. It is characterized by a significant decrease in economic activity, which is typically measured by a decrease in gross domestic product (GDP). A recession is usually defined as a period of economic decline lasting more than six months. During a recession, businesses and individuals are likely to have reduced demand for goods and services, leading to lower production and employment. The severity of a recession can vary, with some being short-lived and mild, while others can be prolonged and severe. There are several key indicators that are commonly used to identify a recession, including GDP, unemployment rate, retail sales, and industrial production. In addition, the Federal Reserve Board of Governors of the United States typically uses a set of criteria to determine whether an economy is in a recession, which include a significant decline in output, a substantial increase in unemployment, and a significant fall in consumer and business spending. These criteria are used to assess the severity and duration of a recession, and to determine when it is likely to end. The overall economic condition of a nation can impact its performance in various industries, such as manufacturing, construction, and services. This can also affect the employment and income levels of individuals within the country, as well as the overall well-being of the population. The economic conditions can also impact the performance of the stock market and other financial markets, as well as the value of assets such as real estate and personal property. In addition, the government may implement policies to mitigate the effects of a recession, such as providing financial assistance to individuals and businesses, or increasing government spending to stimulate economic activity.
