CRYPTO & COFFEE

The market traded sideways over the weekend and those that stayed up late on Saturday night to watch the Ethereum network upgrade would have been disappointed with a distinct lack of price action that followed.

Unlike in the traditional finance world and especially equities, where announcements such as earnings releases and even AGM can lead to price volatility, in the case of this particular network upgrade there was none. Of course, not all hard forks are non-contentious, as was the case with Bitcoin Cash hard fork last year. Going back to Eth upgrade, hitting at block number 9,069,000, the systemwide upgrade was the network's third in 2019, following February's St. Petersburg and Constantinople hard forks.

Istanbul was the network's eighth hard fork overall. Elsewhere, according to survey conducted by Oxford Economics, the majority of asset managers that bank with State Street are interested in digital assets such as Bitcoin, but none have asked the global custodian to store them yet.

According to a survey, 94% of State Street clients hold digital assets or related products and 38% of them said they will increase their allocation of digital assets in 2020.
