I believe that the world needs a global currency that is not dependent on a country or a bank. This is possible when we create a digital currency that can be used as a medium of exchange, a store of value, and a unit of account. We need a currency that is not controlled by any one entity, but rather by a decentralized network of computers all over the world. This is what Decentralized Finance (DeFi) is all about. DeFi is a new category of financial applications that run on blockchain technology, allowing people to access financial services without the need for intermediaries like banks.

We need to create a system that is resilient to government intervention and that is accessible to everyone. This is the role of blockchain technology. It provides a secure and transparent way to conduct financial transactions, without the need for intermediaries or central authorities. This is why we need to untangle the currency from politics and ensure that it is accessible to everyone.

In conclusion, we need to create a digital currency that is not controlled by any one entity, but rather by a decentralized network of computers all over the world. This will ensure that it is resilient to government intervention and accessible to everyone. We need to ensure that this currency is used as a medium of exchange, a store of value, and a unit of account, and that it is not subject to political influence.

The future of finance is in the hands of the people, and we need to ensure that we create a system that is accessible to all. We need to create a digital currency that is not controlled by any one entity, but rather by a decentralized network of computers all over the world. This will ensure that it is resilient to government intervention and accessible to everyone.
