## CRYPTO &amp; COFFEE

The market traded broadly higher, consolidating around \$8,600 level after making a successful re-test on the key \$8,500 level over the weekend. Despite trading softer last week, the hashrate remains near record levels and what's more interesting is that the upcoming mining difficulty adjustment is expected to be a positive one to a tune of around 5%.

Elsewhere, recent reports that a mining tax will be imposed on Bitcoin Cash (BCH) miners from May 2020 and will run for six months is yet to have an adverse impact on the valuation. In fact, miners may use the network split in May as an opportunity to capture alpha before the tax kicks in.

In the meantime, the focus remains on the block reward halving due in early April, with the hashrate also maintaining a narrow lead over its archrival that is BitcoinSV (BSV).

Heading into the final days of the month, it is worth highlighting that Proof of Work (PoW) related assets have substantially outperformed Proof of Stake (PoS) competitors and as pointed out throughout the month, there is research to suggest that Proof of Stake (PoS) may not be as economical as initially thought.
