The COVID-19 pandemic has really taken its toll on the world, with widespread social distancing and lockdown measures taking their toll on economies and businesses. The impact of this pandemic has been felt across all sectors, with many businesses struggling to adapt to the new normal.

In the retail sector, for example, many stores have had to close their doors in order to comply with government guidelines. This has led to a significant decrease in sales for many retailers, and many are struggling to stay afloat. In the hospitality industry, the situation is similarly dire, with bars and restaurants forced to close in order to prevent the spread of the virus. This has led to a significant decrease in demand for these services, and many businesses in the industry are struggling to survive.

The pandemic has also had a significant impact on the aviation industry, with many flights being cancelled and travel restrictions in place. This has led to a significant decrease in demand for air travel, and many airlines are struggling to stay afloat. In the tourism industry, the situation is similarly dire, with many tourists cancelling their trips in order to comply with government guidelines. This has led to a significant decrease in demand for tourism-related services, and many businesses in the industry are struggling to survive.

In the healthcare sector, the pandemic has placed a significant strain on resources, with many hospitals and healthcare facilities struggling to keep up with the demand for medical care. This has led to a significant increase in the cost of healthcare services, and many patients are struggling to afford the care they need.

Overall, the COVID-19 pandemic has had a significant impact on the world, with widespread social distancing and lockdown measures taking their toll on economies and businesses. The impact of this pandemic has been felt across all sectors, and many businesses are struggling to adapt to the new normal.

**COVID-19 ERODES BITCOIN’S SPECULATIVE PREMIUM**

By Troy Norcross

2020 has been a year of two halves, with the first six months seeing a halving of bitcoin (BTC) in May, followed by a meteoric rise in the value of the world’s largest cryptocurrency. The halving event, which reduces the supply of BTC by 25%, is expected to create a speculative premium, with the price of BTC trading at a speculative premium as high as $8,000 in late June. This premium can largely be attributed to the high anticipated halving event and the fact that the number of coins awarded per block is cut in half, reducing the supply. The point that bitcoin is in safe hands and the halving event is expected to create a speculative premium.

So how do you measure the network value? For Digital RFQ, founded by blockchain enthusiasts in 2017, to provide independent analysis of the networks, the team had to conduct a thorough analysis of the underlying network activity.

The team know plenty of crypto traders, who are always keen to provide this data, and the team needed to conduct their analysis in a way that would be useful for their clients. They therefore decided to use blockchain technology to power their service, and Digital RFQ harnesses their collective knowledge and expertise.

The problem with these ill-found allegations is that they are often based on online threats to one's personal identity, and the team found that the team was able to provide credible evidence for any number of people who have been targeted. This team has been able to establish the identity of any number of people who have been targeted, and we have been able to prove that these people are not just individuals but entire communities.

The team's approach is to focus on the most important data points, and the team has been able to use blockchain technology to power their service, and Digital RFQ harnesses their collective knowledge and expertise.
