## CRYPTO &amp; COFFEE

The market traded broadly lower, as the failure to hold onto \$7,000 level revived calls to lower levels. As a result, \$6,500/6,600 zone will now be seen as the short-term support area, a break below \$6,500 level will likely lead to another round of liquidations and send the price towards \$6,100/6,200 area.

For the bulls, a break below will be particularly painful as technically, there really isn't much support until \$5,000 zone. The cautious tone is supported by the shift in the futures curve into backwardation, having traded in contango last week, while the options skew is also indicating bearish positioning, especially over 1-3m strikes.

Still, the big question is whether the recent block reward halvings by Bitcoin Cash and Bitcoin SV are ought to be seen as a reference point for Bitcoin's halving due in mid-May.

The bulls will take solace from the fact that in spite of somewhat bearish market sentiment, the network remains well supported, as indicated by yet another expectation of an upward mining difficulty adjustment. In terms of news flow, Chinese public blockchain index ranks Bitcoin 14th, while EOS topped the list and is ranked as the best performing blockchain project.
